## PROTEST UNDER 37 CFR 1.291(a)

**GROUP 3600** 

Re: System, method, and computer program product for storing internet advertisements at a user computer

US File: 20030028450

Filed: 8/2/2001

Sirs:

Recently I found the above referenced patent filing and believe this filing has NOT issued in the U.S. The US File # is 20030028450

I am voicing an objection as a concerned third party and as a U.S. Citizen. The patent filing describes at great length an advertising delivery system dependent upon an advertising database maintained at a wired and wireless client terminals in a client-server ad delivery system. The appropriate ads are selected through profiling techniques at the server level then a database is created and downloaded (syncing) via the internet or Bluetooth or otherwise to a desktop or wireless or other handheld or mobile terminal (0017) that delivers advertising based upon location/time or in reaction to an executable program or other voluntary user actions. (0006)

Relevant Claims are: 1, 3, 4, 7 and others. The abstract reads, "A method for storing Internet advertisements at a user computer includes receiving plural Internet advertisements at the user computer. Some of the advertisements are tagged using a hypertext markup language (html) tag. An Internet browser within the computer determines which received advertisements are tagged and saves them within the computer. The saved advertisements are then displayed for a user to review later, e.g., in response to a button being toggled. "

Consistently, the inventor describes the invention in internet terms ... because it is simply an extension of the internet relating to advertising delivery. Moving from Point A to Point B as well as the time frame you move from A to B are purely voluntary user events similar to surfing the internet and going to web sites at will. In a GPS or other location based system, advertising is delivered (pushed) (0016) and displayed based upon these "toggled" or other voluntary

user actions in one form or another, albeit audible or a monitor screen or other messages, when made by comparison to the dynamic longitude and latitude coordinates to an advertising database containing geographical and/or time frame coordinates and maintained dynamically at the client level mobile terminal and the location of advertisers. The ads are then delivered to users consequential to his or her actions. Descriptions of these actions and functions are described in (0006) (0008) (0016) (0017) and others.

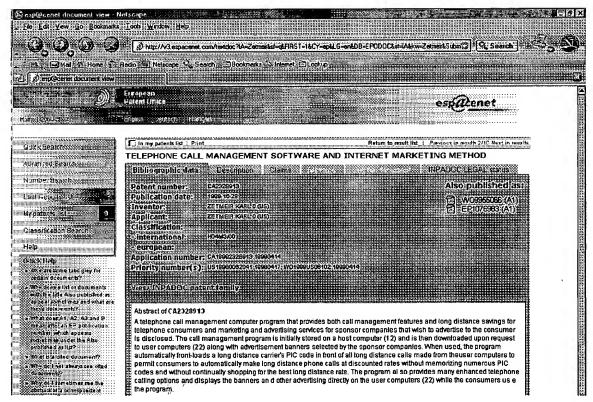

This is referred to as "pull" advertising as a voluntary action on the part of a user interacts with a pre-established database and a targeted ad is displayed.

I am objecting to this patent application, as it is neither novel nor unique. It is of particular note that little prior art was submitted with this filing and only some vague references to server and user supplied profiling systems. The filers are correct that a targeted system based on URLs or keywords or voluntary user actions is more accurate and excels in its ability to deliver "relevant" ads at the exact moment of interest. However, the filers did not include the following references:

- 1. US Patent 6,141,010 ... similar technology
- 2. Gator.com (recently changed to Claria.com) has been marketing such a system since 1998 or 1999
- 3. WO9955066 (A1) or EP1076983 (A1) ... similar technology

There may be more prior art preceding the 7/17/2001 filing.

I believe the Examiner should look very closely at the Claims made and judge accordingly.
